

Bhanu Solanki

Software Engineer 2(OmniceII)

Backend Developer with 3+ years of experience building scalable systems using both Java (Spring Boot, GraphQL, Kafka) and .NET. Worked on multitenant SaaS platforms in healthcare, delivering alert logic, event-driven flows, and database-heavy features. Experienced in both monolithic and microservice architectures with a focus on clean code, performance, and reliability.

EDUCATION

MASAI SCHOOL

- Full-Stack Web Development(Internship Course)
- Jun 2021 - Feb 2022

KRISHNA INSTITUTE OF TECHNOLOGY, KANPUR

- B.Tech (CSE)
- Aug 2017 - Sep 2021

SKILLS

- **Languages :** C#, Java, JavaScript (Basic)
- **Frameworks :** .Net Core, Spring Boot
- **Database :** Postgres, MongoDB, Clickhouse
- **Messaging & APIs :** Kafka, GraphQL, REST
- **Tools :** Git, Postman, Docker, VS Code, Rider, IntelliJ IDEA, Conduktor
- **Others :** Microservices, Agile/Scrum, Logging & Auditing, Unit Testing

PROJECTS

MPL-Clone

A web application that allows users to win rewards and cash prizes by playing the games of their choice.

Tech Stack : HTML | CSS | Javascript | Node.js

Tatacliq-Clone

A web application that allows users to buy various products.

Tech Stack : HTML | CSS | JS | LocalStorage

ACHIEVEMENTS

Recognized with "Spot Award" at Omnicell

- Recognized for leading the development of a reusable backend library enabling consistent filter, sort, and pagination logic across microservices.

INTERESTS

- Sports • Gaming • Fitness • Travelling

WORK EXPERIENCE

Software Engineer II - Omnicell August 2024 – Present | Bangalore, India

Achievements/Tasks

- **ROLE:** Backend engineer in the Medication Management team, focusing on unstocked medication queue logic and configurable alerting systems. Involved in designing features that improve decision-making for nurses and streamline hospital medication workflows.
- **KEY ACHIEVEMENTS:**
 - Implemented rule-based filtering and frequency logic for configurable alerts (e.g., once per user per patient), helping reduce alert fatigue and improve patient safety.
 - Enhanced reliability and consistency across medication history tracking by supporting deletion-aware data models spanning SQL Server and ClickHouse.
 - Resolved concurrency issues in medication queues by introducing retry-safe write operations and versioning strategies.
- **TECHNICAL EXPERTISE USED IN DAY TO DAY WORK:** Experienced in both monolithic and distributed architectures. And backend technologies/work on a daily basis are listed below:
- **Messaging & Queues:** Implemented event-driven designs using Kafka for decoupled communication between services.
- **Event-Driven Systems:** Built and maintained asynchronous flows through event listeners and handlers in C# and Java.
- **Monitoring & Logging:** Implemented and utilized application-level logging, error tracking, and status codes to ensure backend reliability.

Software Engineer I - Omnicell April 2022 – July 2024 | Bangalore, India

Achievements/Tasks

- **ROLE:** Developed alerting and medication tracking microservices using Java, Spring Boot, Kafka, GraphQL, and MongoDB. Worked on scalable backend systems supporting hospital care platforms.
- **KEY ACHIEVEMENTS:**
 - Developed complex GraphQL APIs with deeply nested resolver trees to provide real-time, patient-specific alerts to clinicians.
 - Introduced Kafka-based workflows to trigger and consume alert-related events across microservices.
 - Built frequency-aware alert evaluation logic and contributed to modularizing business rules for medication warnings.
